

TEJAS AI — One Pager

The autonomous brain for cooling & energy · तेजस् — radiance, sharpness · Built in India

The problem

- **30–40%** of data-center power is cooling. Cold storage, hospitals, factories: similar or worse.
- Almost all run on **1990s rule-based BMS logic** — react after heat builds, over-cool “to be safe.”
- **India:** 40–48°C summers, stressed grid, water scarcity, DC + cold-chain boom — **nobody optimises the mid-market.**

The solution

Tejas AI replaces dumb thermostats with a self-learning agent that **predicts, optimises, explains, and acts** — on a **calibrated digital twin** before it ever touches your hardware.

Capability	Outcome
Predict heat waves & load spikes	Act in <10s, not after trip
Optimise setpoints continuously	20–28% less cooling energy, same safety band
Predictive maintenance	Flag GPU-16-class faults months early
Voice + vernacular	Operator asks; dashboard builds itself
Field AR	Technician navigates to exact part

Proof anchors (real world)

Vertical	Anchor
Data center	Chennai DC corridor + 2024 heat wave
Geothermal	The Geysers, CA — reinjection
Factory	Renesas Naka fire 2021
Cold chain	₹92,651 Cr annual loss

Deploy safely

Twin → Shadow (read-only) → Advisory → Supervised → Autonomous

On-prem. Ollama local LLM. Safety Supervisor. Instant revert to baseline.

ROI (12 MW hall, India)

	Annual
Cooling energy saved	₹1.8–3.2 Cr
One avoided outage	₹2+ Cr
50-site fleet	₹90–160 Cr

Shadow pilot validates on your historian and tariff.

Business model

Savings-share (primary) · SaaS per site · Twin-build engagement

vs competition

	Phaidra / hyperscaler AI	Tejas
Target	NVIDIA-scale factories	Cold chain, edge DCs, factories
Deploy	Cloud / premium	On-prem, sovereign
Pricing	Enterprise licence	Savings-share

Live demo (today)

```
cd tejas-twin && ./run.sh
```

→ <https://localhost:7878> — 3D data center, autonomous cooling, GPU-16 maintenance, fleet projection, AR/VR

Next step

30-day shadow pilot — read-only on your BMS/historian. Savings report on your data. Zero rip-and-replace.
